ON-LINE TESTING FOR NEW RECURITS

Anglo-Eastern has launched a Web-based On-line Test for it's pre-recruitment screening process for deck and engine cadets.

Anglo-Eastern recruits around four hundred deck and engine cadets worldwide for the 200 plus ships managed by the company.

Over 1500 applications are received by us each year. The aim of introducing on-line testing is to standardize our recruitment procedures worldwide and to allow applicants to take the test from any part of the world, sitting at home or even in a cyber-cafe said Capt. Pradeep Chawla, Director for Quality Assurance and Training.

The tests cover Maths, Science and English. Reasoning Ability and

General Knowledge and are similar to the SAT (Scholastic Aptitude Tests) taken by students entering university.

Besides giving instantaneous results, the system compares the scores achieved by applicants in different countries, against the national and international averages. Peter Cremers, CEO of Anglo-Eastern Group commented with the worldwide shortage of officers continuing to grow, we have to compete with other industries globally to attract the best talent for the modern ships. This testing creates an opportunity for us to explore new crew sources worldwide.

The web based Competency Management & Examination testing platform is developed & provided by Core Competency Marine Training Pvt Ltd, a New Delhi based Software Company, which has produced computer and web based training material and also has facilitated E learning software development for Anglo-Eastern in the past.
